

MULTI-PURPOSE DRILL BIT TIPS FOR DRILLING GLASS

For best results, follow these directions:

POSITION SPEED PRESSURE PATIENCE

1. Place the glass/bottle on a flat surface with a towel or piece of cloth between the glass/bottle and the flat surface.
2. The operator should be in a POSITION that assures he/she is comfortable with holding the drill motor in relation to the place drilling.
3. For best results, use any variable speed drill motor at SLOW SPEED and use a liquid coolant while drilling with the ARTU Multi-Purpose Drill Bit.
4. The ARTU Multi-Purpose Drill Bit bores through materials with a filing action; therefore, you will notice a build-up of powder while drilling.
5. Use LIGHT PRESSURE while drilling, allowing the drill bit to do the work.
6. Do not push the drill bit to get the job done quicker. Time and PATIENCE will give you the best results.

Follow all safety requirements and use proper safety protection when using ARTU products.

If you have any questions and/or need additional information, contact Customer Service at (800) 367-2788 or sales@artu.com.
